

UCSUR Proposal for the Seiyuunese Script

Abstract

This document presents a draft proposal for the encoding of the Seiyuunese script. The proposal is based on the repertoire supplied by the author and a draft code chart occupying the Private Use Area range U+F26B0–U+F26F2.

Introduction

Seiyuunese is a constructed writing system with letters, punctuation, symbols, and numerals. This proposal records the repertoire and naming conventions in a form suitable for UCSUR review.

Block Allocation

Proposed draft allocation: U+F26B0–U+F26FF. Currently implemented in the Private Use Area for testing and font development.

Character Repertoire

The repertoire contains punctuation marks, special symbols, core letters, additional letters, vowel signs, numerals, and spacing characters.

Character Naming Principles

All names follow Unicode conventions using uppercase English names prefixed by SEIYUUNESE.

Properties

Characters are proposed as spacing letters and symbols unless otherwise specified. Numerals have decimal values. Punctuation follows standard Unicode punctuation behavior.

Code Chart

Seiyuunese
F26B0-F26FF[illegible]

NamesList Extract

F26B0 SEIYUUNESE EXCLAMATION MARK F26B1 SEIYUUNESE QUESTION MARK F26B5
SEIYUUNESE CREDIT SIGN F26C0 SEIYUUNESE LETTER G F26D0 SEIYUUNESE LETTER A
F26DD SEIYUUNESE LETTER U F26E0–F26E9 SEIYUUNESE DIGITS ZERO–NINE F26F1
SEIYUUNESE FULL STOP F26F2 SEIYUUNESE LETTER AN

UnicodeData Notes

A future version of the proposal should include General_Category, Bidi_Class, Numeric_Value, Line_Break, and other normative properties.

Rendering

The script is currently represented by a custom font. Characters are encoded individually and do not presently require complex shaping.

Acknowledgements

Prepared from the supplied Seiyuunese repertoire and code chart.
